The Attendance Module

Clarity Human Services allows you to record and view client location data in various formats. You can add location data to **screens**, **services**, or **Locations**. You can view client locations collectively for a client from the **LOCATION** tab or across a Continuum using **Outreach**.

Location Types

There are four different ways you can record client location data in Clarity Human Services:

Location Type	Definition	Recorded from	Displays in Location Tab?	Displays in Outreach?
Field Interaction	Client geographic information is added to the database when a user clicks the  button in the Location tab .	<i>Location tab</i>	✓	✓ *
Address	Client geographic information is added to the database when a user clicks <i>Add Address</i> in the	<i>Location tab</i>	✓	✓ *

Submit a Request	>
System Status	
COVID-19 Resources	>

	<i>Location</i> tab. This type includes additional information fields, such as notes, address type, and name.			
Geolocation Field	Client geographic information is collected through a "Geolocation" Type field and recorded in a screen by a user clicking the <i>Add Location</i> button.	Screens (<i>Assessment, Profile, Status, Enrollment, Exit, Follow-up</i>) with a "Geolocation" Type field in the client record	✓*	✓*
Geolocation-enabled Service Item	Client geographic information is collected through a service item with Enable Geolocation toggled on and recorded by clicking the Add Location button.	<i>Service Items</i> with <i>Enable Geolocation</i> toggled on	✓*	✓*

*Location records display only if **Outreach** is enabled; their display is subject to **Location Filters**.

For more information about recording each type of location in the client record, click the location type above. Administrators wanting to learn how to configure fields and services to collect location data should refer to **Service Item Option: Geolocation** and **Introduction to Geolocation Fields**.

Adding Location Data

Wherever you add client location data, you'll be presented with the ADD LOCATION pop-up, where you can either manually search for a location or use your device's location.

Searching Manually

When manually searching for a location, you can search by latitude/longitude or address details, including cross-streets and landmarks. The system will sort search results by proximity based on your device location (or if you haven't enabled location permissions in your browser, the address of your assigned agency or the agency you're **switched into**).

Alternatively, the location can be identified using the move and zoom map features and dropping a "pin" on the map by clicking the location.

Note: When **Restrict User Visibility by CoC** is ON for a CoC, only those logged in under that CoC's agencies can see the CoC's encampments in the search field.

Using Your Device's Location

To drop a pin on the map based on the location information of your device, click *CURRENT LOCATION*. This location will be most accurate from a mobile device using Global Positioning System (GPS) (as opposed to browser location data).

ADD LOCATION

Address

ADD

Limit Geographic Area Address Suggestions

If your system administrator has enabled *Outreach* and the LIMIT GEOGRAPHIC AREA ADDRESS SUGGESTIONS functionality, the system will only display results within a certain radius. You can untoggle this setting if you prefer.
